Acknowledgements

America’s Health Insurance Plans (AHIP) wishes to acknowledge the members of AHIP’s Health Literacy Task Force, chaired by Jill Griffiths of Aetna, who provided valuable input and feedback to the development of this toolkit.

America’s Health Insurance Plans
601 Pennsylvania Avenue, NW
South Building, Suite 500
Washington, DC 20004
(202) 778-3245
http://www.ahip.org/healthliteracy

AHIP is the national association representing nearly 1300 members providing health benefits to more than 200 million Americans. Our member companies offer medical expense insurance, long-term care insurance, disability income insurance, dental insurance, supplemental insurance, stop-loss insurance and reinsurance to consumers, employers, and public purchasers.
Despite growing information on the magnitude and consequences of low health literacy for quality of care and cost, including recognition that low health literacy is a factor that greatly affects health status, there has been little to assist organizations as they begin and advance their health literacy programs.

Now available for use by professionals in your organization charged with developing health literacy programs, plain language initiatives, and member-experience programs is a toolkit that outlines five fundamental steps to take. The toolkit provides links to important resources and may be especially useful for those just starting up their initiatives.

Steps for Initiating or Advancing a Health Literacy Program

- Assessment Tools and Resources
- Training Programs and Concepts
- Technology Resources and Strategies
1. Convene an Internal Group of Stakeholders to Support, Plan, and Carry Out the Work

- Learn about the issue and identify or prepare a background document that defines health literacy and the benefits of addressing it, including who may be helped.

  **Key Resources:**
  
  **American Medical Association – Health Literacy**
  http://www.ama-assn.org/ama/no-index/about-ama/9913.shtml
  
  **Institute of Medicine Report – “Health Literacy: A Prescription to End Confusion”**
  
  **National Center for the Study of Adult Learning and Literacy**
  The Health Literacy Environment of Hospitals and Health Centers: Partners for Action: Making Your Healthcare Facility Literacy-Friendly
  http://www.ncsall.net/index.php?id=1163

- It is ideal if you have the support of senior leadership, but many companies have been successful with grassroots efforts that have bubbled up.

- Who are the stakeholders? Anyone in your organization who touches consumers via the written word, spoken word, or the web, as well as those who can bring about policy and operational change to support the effort. This includes: member communications, provider communications, disease and case management, and pharmacy. It also includes your IT team and your legal team.

- In identifying the stakeholders, it may be useful to define health literacy and then consider which departments can facilitate these efforts. Health literacy involves how to obtain information and then how to read, process, understand and act on it.

- It will be important for you to let your colleagues know how low health literacy impacts adverse outcomes and how it relates to and plays out for different disciplines.

- At some point in your process, you will need to have the organizations “blessing” for the work so that those involved can allocate time and other resource to the initiative.

- Early on, it may be useful to decide on a structure (e.g., work plan, goals and objectives, etc.) so that two or three colleagues responsible for leading the work can facilitate or coordinate efforts. Other organizations have found that a formal structure becomes important quickly.

  **Key Resource:**

- Background on Health Literacy, Janet Ohene-Frempong, MS, J O Frempong & Associates, Inc.
- The Basic Elements of a Health Literacy Program, Janet Ohene-Frempong, MS, J O Frempong & Associates, Inc.

Part II – Starting Up and Advancing Your Company’s Health Literacy Program
- Affinity Health Plan, Lauren M. Hernandez, MPA, Project Manager, Community Health Innovation
- Group Health Cooperative, Jessica Ridpath, Coordinator of Research Communications, Center for Health Studies

Part III – Health Literacy Campaigns
- Aetna Health Literacy Campaign, Carla Espinoza, LVN, CPHQ, Aetna
- Health Literacy Initiatives, Terry Clark, Chief Marketing Officer, Enterprise Marketing, Ovations (a UnitedHealth Group company)

2. Make the Case to Leadership for Moving Ahead
- Borrow from existing presentations that make the business case for moving ahead. When we say “business case” we mean making the case that health literacy has an impact on the health of the populations you serve, a primary business objective of health plans.

**Key Resources:**

**Agency for Healthcare Research and Quality, Health Care Innovations Exchange**
Highlights several case studies on health literacy programs implemented in different settings and populations, November 11, 2009 Archive.
http://www.innovations.ahrq.gov

**Aetna’s Health Literacy Public Policy Perspective**
Provides background information on the impact of health literacy on health status and patient-provider communication. It also highlights a few health literacy awareness campaigns launched by Aetna followed by general questions and answers about health literacy and health care.

**U.S. Dept. of Health and Human Services’ Quick Guide to Health Literacy**
Page 7.2 lists talking points to make the case for health literacy improvement.
In making the case, and whenever you talk publicly about health literacy, it is important to include real life stories about the impact of health literacy on individual consumers. These often make a profound impression on those who hear them and sometimes advance an organization or individual’s interest more than dry statistics.

**Key Resources:**

**Health Literacy Month**
http://www.healthliteracymonth.org

**Health Literacy Month Stories**
http://www.healthliteracymonth.org/hlmonth_stories.asp

**Examples:**

- “Tale from the Front: A Physician’s Story” by Karen E. Edison, MD
  Dr. Edison shares two encounters she had with explaining medical procedures and treatments to patients in her dermatology practice. By recognizing the need to use plain language and experiences that patients could relate to, she was able to convey important health information.
  http://www.healthliteracymonth.org/hlm_article.asp?PageID=9171

- “Family Member Helps 86-Year-Old Iowan Take Control of Her Meds” by Don McCormick
  Marguerite Avant, an 86 year old, experienced difficulty knowing how and when to take her medications. Her great nephew encouraged her to speak with her physician about how to properly take her medications. Marguerite’s physician recommended that she create a pill card that included visual representations of her medicine as well as dosage information.
  http://www.healthliteracymonth.org/hlm_article.asp?PageID=9277

**National Cancer Institute (NCI) Cancer Bulletin** – “In Talking about Prostate Cancer, Medical Language May Confuse Some Patients”
http://www.cancer.gov/ncicancerbulletin/032409/page3#c

3. Assess the Organization

- Use the tool developed by Dr. Julie Gazmararian of Emory University with support from the Robert Wood Johnson Foundation, and working with the AHIP Health Literacy Task Force and individuals at our member companies who are engaged in disparities in health and cultural competency work.
  http://www.ahip.org/healthliteracy

- Do not be discouraged by the comprehensive nature of the assessment. It can be used to assess an entire organization, but also can be used in other ways. For example, you can use it as a guide to long term goal setting, meanwhile focusing your efforts on getting a small win by choosing one of many areas as a starting point.

**Key Resource:**

AHIP’s “Connecting with Care: Checklist for Evaluating Plan Websites for User-Friendliness”
http://www.ahip.org/content/default.aspx?docid=22865
4. Using What You Learn From the Assessment, Develop a Plan that Includes Goals and Measurement of Goals and Adoption of Policies and Procedures.

- In thinking about policies and procedures, you may want to consider adopting a style manual or tool kit that lays out guidelines for written materials, and encouraging a formal policy that it requires its use. Protocols for verbal interactions may also be helpful, as well as guidelines for the web. Policies may also include a requirement that materials be tested, that individuals obtain training, and that vendors be selected on the basis of their capability to support your program.

  **Key Resource:**
  
  Harvard School of Public Health – Health Literacy Studies – Designed for professionals in health and education, this website provides practice strategies, tools, resources, and policy reports on health literacy
  http://www.hsph.harvard.edu/healthliteracy

5. Provide Training and Tools to Those Who Interact with Consumers

- Consider the purchase of training programs (or the development of them if you have the resources to do this) for those who create printed/web-based communications and for those who speak to your members.

  **Key Resource:**
  
  Health Resources and Services Administration, “Unified Health Communication (UHC): Addressing Health Literacy, Cultural Competency, and Limited English Proficiency”
  This is a free on-line course that focuses on improving patient communication skills, increasing awareness and knowledge of factors that affect communication with patients and implementing patient-centered communication practices.
  http://www.hrsa.gov/healthliteracy/

- There are basic concepts that training should cover, e.g., principles of plain language, the importance of questions (Ask Me 3), the “teachback” method, and active listening.

  **Key Resources:**
  
  Partnership for Clear Health Communication—Ask Me 3

  The Harvard School of Public Health: Health Literacy Studies—Innovative Materials
  This website provides examples of plain language glossaries for chronic diseases (e.g., asthma, lupus, arthritis) and materials for diverse patient populations.
  http://www.hsph.harvard.edu/healthliteracy/innovative.html

- There are existing tools and word lists that can help to simplify language, but it is important to understand that language at a 5th or 6th grade level alone does not ensure readability.
